2. INTRODUCTIONS

Ultra-stable temperature chamber (air bath) is design to maintain the uniform constant temperature over a wide operating range.

Air Baths are a superb choice for precision controlled operating environments without the mess and expense of fluid bath operation.

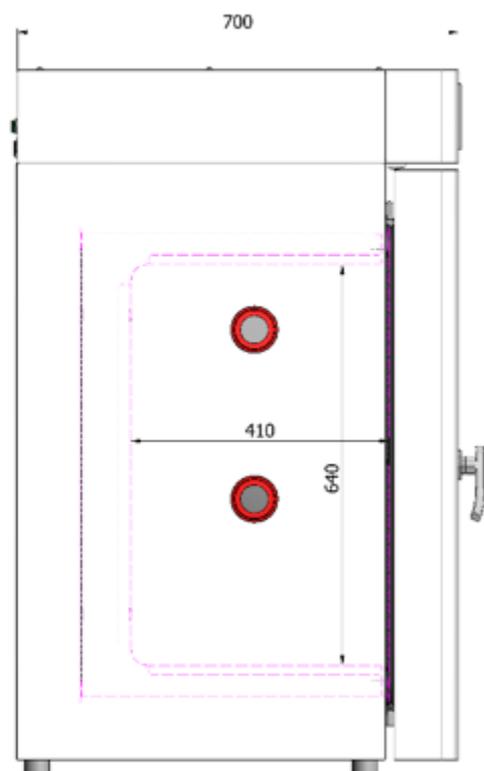

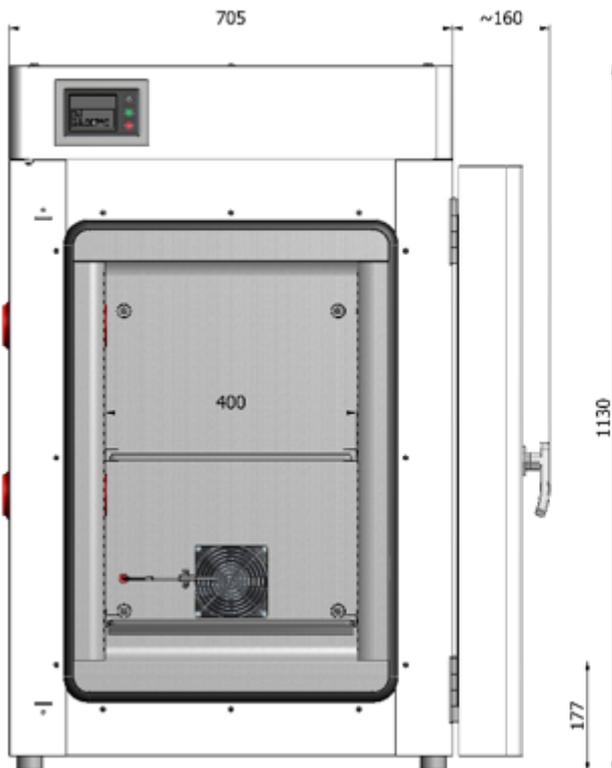

The device housing is made of powder coated aluminized sheet metal. Internal chamber is made of stainless steel AISI 304. Inside are two shelves witch allowing easy access to the inserted objects. Easy access to the inside of the chamber is achieved through the conveniently mounted front door. Wires or cables are brought into the chamber through a small, insulated opening on the side of the unit.

The integrated control unit adds convenience as it eliminates a separate controller. The internal temperature is shown on an external display located on the front of the chamber. A touch display can be used to set the individual temperatures between 15 °C and 50 °C.

Cooling and heating for the chamber is provided by a Peltier Cooling System. Internal fan is used to circulate the air inside the chamber to provide temperature stability and uniformity.
